

DevOps Engineer (W/M/X)

Welcome at Yuzzu

Our slogan is 'surprisingly smoothly insured'. The same goes for your career at Yuzzu, the Belgian market leader in direct insurance. As a new employee, we welcome you to a surprisingly smooth and dynamic working environment, where we always speak clear language and keep our promises. Without small print, and with a smile.

Would you like to invest your energy and talent in an insurance company in full growth? Then take a quick look at this vacancy and apply by sending your CV and motivation letter to recruitment@yuzzu.be!

Yuzzu is currently seeking a **DevOps Engineer**

Which are your most important targets?

- ▶ Yuzzu is constantly launching new projects and initiatives aiming to innovate, meet the expectations of clients and internal users, and prepare for the future by modernizing its IT/application landscape. With this in mind, several multidisciplinary teams are continuously working together with a cross-functional technical team on these projects, based on an "Agile/Scrum" approach.

Which are your responsibilities?

- ▶ As DevOps Engineer you will be responsible for implementing and managing various IT platforms with the infrastructure teams of AXA Group.
- ▶ You will handle the automation of integration, testing, deployment processes, and changes in platform environments.
- ▶ You will collaborate closely with other agile teams, the business, and the support team to address issues and manage platform incidents.
- ▶ You will ensure the consistency of the platforms based on established recommendations.
- ▶ As a member of the cross-functional technical team serving our internal and external clients, you will contribute with your ideas and commitment to the continuous improvement of the team's operations and, on a broader scale, the company.
- ▶ You are enthusiastic about participating in a large-scale journey of cloudifying our platforms.

What are your skills and experiences?

- ▶ You have a degree in computer science (bachelor's, master's, or equivalent) and solid experience in application development and DevOps engineering.
- ▶ You are comfortable with containerization environments (Docker, OpenShift, Kubernetes, Helm, Scaffold, ...) and infrastructure as code principles.

- ▶ You have in-depth knowledge in at least one of the cloud environments (AWS, Azure, Google Cloud) and cloud service integration.
- ▶ You are proficient in scripting languages such as Bash, PowerShell, Python, or others.
- ▶ You are familiar with setting up automation, deployments via CI/CD (Jenkins), as well as automation tools (such as Terraform, Puppet, ...).
- ▶ You are familiar with the needs of monitoring, logging, and traceability of platforms (using tools such as Kibana, Grafana, Prometheus, ...).
- ▶ You have some understanding of managing complex platforms.

What is your profile?

- ▶ Flexibility is in your genes: managing changes and priorities is part of your daily routine.
- ▶ You are interested in new technologies.
- ▶ You have already worked in an Agile team.
- ▶ You are focused on business needs and align your priorities with them.
- ▶ As a DevOps Engineer, you have an analytical mind. Creativity and innovation are part of your qualities.
- ▶ Thanks to your team spirit and communication skills, you maintain excellent relationships both internally and externally.
- ▶ Dynamic and resourceful, open and curious, you work independently and proactively, and have a sense of responsibility.
- ▶ You are inspired, passionate, and inspiring.
- ▶ To work at Yuzzu, any experience in accident, fire, and risk insurance is an additional asset.
- ▶ You are proficient in English and at least one of the two national languages (Dutch or French).

What do we offer?

- ▶ A competitive salary with extra-legal benefits.
- ▶ A friendly and open working atmosphere in a pleasant environment.
- ▶ A diverse and motivating role at the heart of our company.
- ▶ Autonomy based on your skills.
- ▶ A good work-life balance, thanks to hybrid working setup.
- ▶ Ongoing training and support.
